

Feel Right at Home

from basement to bedroom

The ultimate solution
to indoor humidity and air quality.

Introducing *AirTech-107*.

Solving the basement and crawl space problem.

Nothing in your home has more impact on your family's comfort than interior air quality and humidity. AirTech-107 will help solve these potential problems. However, unlike other systems, it also tackles the dreaded issues of basements and crawl spaces.

Basements and crawl spaces are usually cold, moisture builds up in them and they are poorly ventilated. That's what causes mold, mildew and odors to grow. You need to address these problems fast because they can quickly move to the rest of your home.

AirTech-107 (patent pending) is the most advanced system on the market to control these issues. It adds a floor of living space to your house, maintains consistent humidity and temperature levels throughout your entire home while also exhausting natural toxins that accumulate.

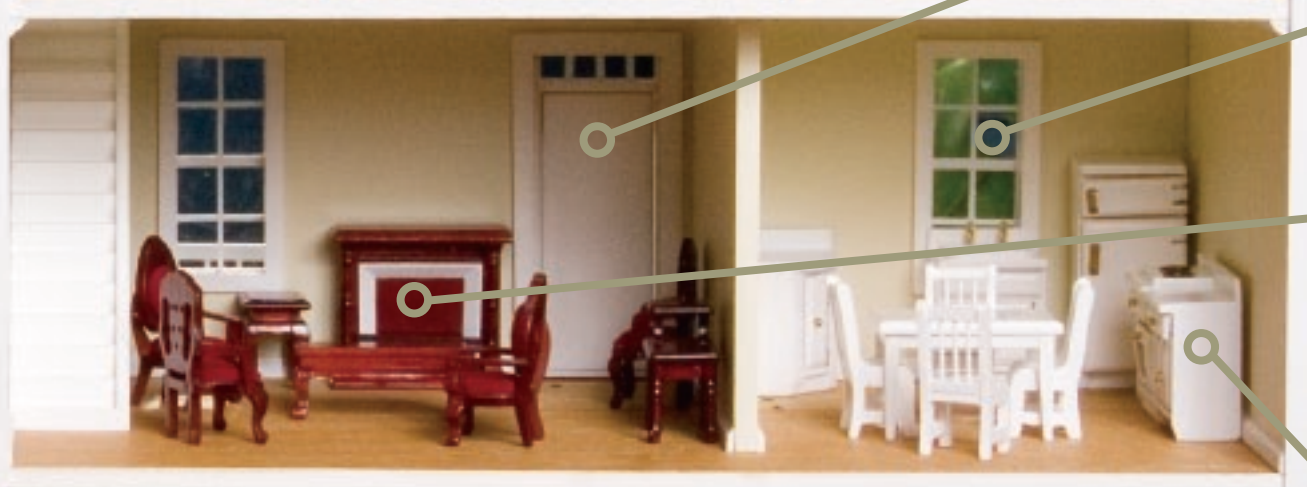

Total comfort. Total efficiency. Whole-house. Basement to bedroom and every room between. Lessen mold activity. Diminish odors. Exhaust toxins. Reduce your energy bills. All with one unit. AirTech-107.

Bad Words

Humidity. Basements. Both have bad reputations. In itself, humidity is not bad. Your home needs some humidity. Issues occur when you have too much or too little humidity in your home. Basements and crawl spaces abandoned because they're damp and smelly. That wouldn't happen if they were properly treated. Enjoy the comfort of your new basement – AirTech-107 is your most advanced solution!

Complete Comfort Control

Healthy family – Toxins naturally build up in your home. To get these harmful elements out, fresh air must be brought in, from outside several times a day. Also, uncontrolled humidity can contribute to health problems by creating ideal conditions for dust mite growth, mold, mildew and unwanted odors. AirTech-107 helps keep your family healthy by bringing fresh air into your home and controlling humidity levels.

For all climates – Regardless of where you live – Alaska, Florida or somewhere in between – AirTech-107 works all year long! It's a four-season humidity and air quality control solution.

Smart system – Every household generates humidity. Washing, cooking, bathing, etc. AirTech-107 detects the level of humidity in your home. The system allows the targeted level of humidity to enter or remain. Whole-home comfort.

Whole-home living – From the basement to the bedroom and every room between – even crawl spaces – AirTech-107 maintains a uniform humidity level and temperature throughout your home.

Energy efficient – Green building codes require that new homes be energy efficient. AirTech-107 will lower your energy costs because you won't be using your air conditioner or heater as much. Add the fact that it runs much more efficiently than most other systems and you have compounded savings.

Healthy home – Excess or insufficient humidity can be bad news for homeowners. Either can damage the physical structure of your home. Excess humidity can create mold, mildew, odors and the ideal condition for termites. A lack of humidity can dry out hardwood floors, walls and furniture. AirTech-107 helps you protect your investment.

Protect your investment – Curtains, carpets and wallpaper are replaceable. However, when mold damage becomes structural – wallboard, warped cupboards, hardwood floors, rotting window sashes or doorframes – repair bills get very large, very fast.

Control the humidity that gets in – Most systems pump outside air into the home and then work to reduce excess humidity after it's indoors. This is an inefficient use of energy. Once in, it's also difficult to get the excess humidity out, leaving it to rest in unwanted areas of your home such as wall cavities, furniture and on your child's dollhouse. AirTech-107 has a smart computerized system that controls the entering humidity to the desired level that your house needs while reducing your energy costs compared to other systems.

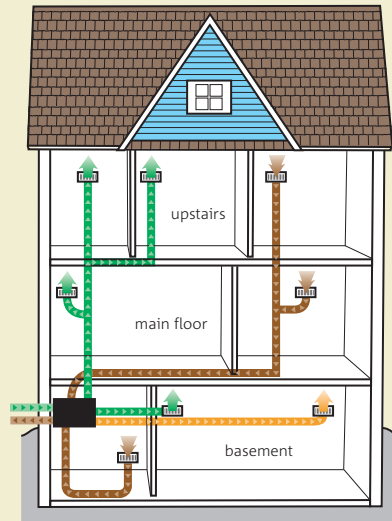

A livable basement – Imagine adding an additional floor of living and storage space to your home. Rooms as livable as the upper levels of your house and storage space that isn't damp and smelly.

Why is AirTech-107 a better system?

AirTech-107 is better for two main reasons. First, it is a **smart system**. Rather than having to manually turn it off or on, the computer in the AirTech-107 does it automatically. It also adjusts itself for inside environments and outside conditions. You don't have to tell it what to do. It knows. All you have to do is determine the percentage of humidity that is ideal for your family and AirTech-107 takes over. Second, it has a **double hybrid core**. One core maintains humidity, air quality and temperature in the upper levels of your house and the other is dedicated entirely to your basement or crawl space. Given they're much different environments we treat them separately – but with the same results. Whole-home comfort.

- ▶ Controlled fresh air entering your home.
- ▶ Toxins and humidity leaving your home.
- ▶ Circulated air controlling humidity and temperature in your basement or crawl space.
